Summary

Pursuing role of full-stack web developer.

Technical skills include:

- HTML
- CSS
- Javascript
- JQuery
- NodeJS
- Bootstrap/Bulma
- API integration
- Responsive design

Projects

Movie Drink Matchmaker App (HTML/CSS/Bulma/Jquery/API Integration)

A movie night application that uses two separate web APIs to return a popular movie based on genre selected and a drink suggestion based on alcohol type. User can load a new movie or drink using the buttons provided. User can store the desired pair on the favorites page using local storage.

Deployed Application: <https://evperkinsjr.github.io/movie-drink-matchmaker/>

Work Day Scheduler (HTML/CSS/Bootstrap/Jquery/Moment.JS)

Project displays a day planner with time blocks. The current day is displayed at the top of the calendar. Time blocks are color coded according to past, present or future using Moment. Clicking on a time block allows an event to be entered, and clicking the save button stores it in local storage.

Deployed Application: <https://jalgonz.github.io/work-day-scheduler/>

Password Generator (HTML/CSS/Javascript)

Application includes a button that prompts you to choose amount of characters in password, then ask which character types to include (uppercase, lowercase, numbers and special characters). Then password is generated in textbox.

Deployed Application: <https://jalgonz.github.io/password-gen/>
